### **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Furusawa (US 2002/0151161) in view of Goto (JP 2002-324966).

Furusawa discloses a method for forming a conductive film pattern. This method comprises forming film 12 on substrate 11, applying a particle dispersion solution 14 using an ink jet printing method and converting the solution to a conductive film 16 by heat treatment in an oven. See paragraphs [0042] through [0055].

However, Furusawa does not disclose the adhesive face in the manner claimed by the applicant. Regarding this difference, the applicant is directed to the reference of Goto.

Goto discloses a method for forming a circuit pattern, which employs a resin composition containing a thermosetting resin and which functions as an organic binder. It would have been obvious to one having ordinary skill in the art to employ a resin composition, as taught by Goto, in the method of Furusawa in order to enhance adhesion of the materials. In addition, without the disclosure of unexpected results, it is the examiner's position that the specific materials employed as well as the concept of and stacking the substrates are well known and conventional in the art and would have

Application/Control Number: 10/815,292 Page 3

Art Unit: 1734

been obvious to employ in the above-described method of Furusawa in view of Goto based on desired properties of the articles being manufactured.
